FRESH BLOOD

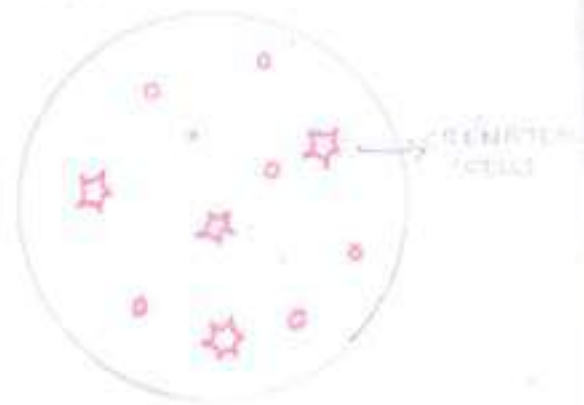

ISOTONIC SOLUTION

HYPOTONIC SOLUTION

HYPERTONIC SOLUTION

 Prof. Dr. Vinod Kumar R B
 Principal
 Al-Azhar Dental College
 Thodupuzha - 685 605

1. Describe with the help of diagram, morphological changes occur when blood mixed with isotonic, hypotonic, hypertonic solution?

i) Blood isotonic solution: Here the erythrocyte are seen without much change in the morphology. This is because isotonic solution has got some amount of osmotic pressure as that of intracellular fluid of every erythrocyte.

ii) Blood in hypotonic solution: Some of the cells are swollen and some of the other are seen to rupture. This is because fluid from outer enter cell causing it to swell and rupture. This rupture of RBC release haemoglobin in haemolysate looking of blood and then ruptured cell in process become ghost/shallow cells. Ghost cells are seen in faint outline of removal of plasma membrane.

iii) Blood with hypertonic solution: H₂O fluid from RBC passes out of the cell because of high osmotic pressure outside. As a result cell membrane shrinks and the cell will have a wrinkled appearance. These cells are known as crenated cells.

2. What is Rouleaux formation?

When the blood is mixed as such single as well as clumped RBC will be seen. In clumping many cells are arranged in piles their flat surfaces facing each other. This is known as Rouleaux formation.

Prof. Dr. Vinod K. [Signature]
Principal
Al-Azhar Dental College
Thodupuzha - 685 605

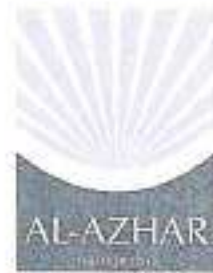

3. What are Ghost cells ?

When blood is mixed with hypotonic solution, the RBC swell up to endosmosis and become spherical. When the volume increases, the cells break and contents go out. The remnants of the cell membrane appear as ghost cells when viewed under microscope.

$$\begin{aligned} \text{Corrected specific gravity} &= 1.012 + 0.007 \\ &= 1.019 \end{aligned}$$

B. Chemical Characteristics

Tests for Inorganic Constituents of Urine

1) Test for Chloride

To 2ml of urine sample in a test tube add 0.5ml of concentrated nitric acid and 1ml of 3% silver nitrate.

Formation of curdy white precipitate. Presence of chloride

Principle :- the reaction of acidified urine with silver nitrate results in the precipitation of white coloured silver chloride.

Prof. Dr. Vinod Kumar R E
Principal
Al-Azhar Dental College
Thodupuzha - 685 695

a) 2) Tests for Phosphates and Calcium

To 10ml of wine sample added 3ml of ammonium hydroxide solution and boil till the white precipitate of calcium phosphate and magnesium phosphate are formed. Filtered the contents through a filter paper and discard the filtrate. Wash the residue on filter paper by just pouring few ml of distilled water through the filter paper. Transfer the funnel with filter paper having the precipitate over a dry test tube. Then added 3ml of hot 20% glacial acetic acid through the filter paper to dissolve the precipitate and to collect it in the test tube underneath. Then divide the filtrate collected into two parts.

i) Test for Phosphates

To one part of the filtrate, add a few drops of concentrated nitric acid and 2ml of ammonium molybdate solution and boil.

Formation of canopy yellow precipitate. Presence of inorganic phosphates.

Principle :- On boiling with ammonium hydroxide, phosphates of calcium and magnesium are precipitated from wine sample. These are then filtered and redissolved in hot 20% glacial acetic acid. Phosphates present in the filtrate react with ammonium molybdate to form canopy yellow precipitate of ammonium phosphomolybdate in the presence of concentrated nitric acid.

ii) Test for Calcium (Sulkowaski's Test)

To the second part of the filtrate, add 2ml of 2% potassium oxalate solution.

Development of white precipitate. Presence of calcium.

FACTORS AFFECTING SETTING EXPANSION

- Mechanical mixing reduces setting expansion when compared to hand mixed stone.
- Increase in W/P ratio reduces the setting expansion.
- Modifiers generally reduce the setting expansion.
- Potassium sulphate 4% solution reduces setting expansion from 0.5 to 0.06%.
- Sodium chloride and borax also decrease the setting expansion.

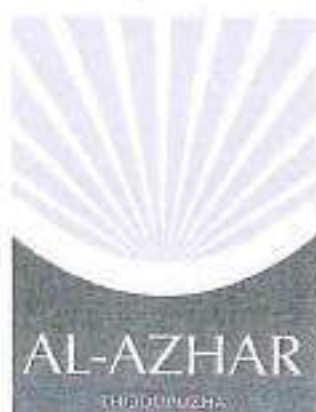

For accuracy in dental procedures, the setting expansion has to be minimized. The manufacturers achieve this by addition of K_2SO_4 . This, however, reduces the setting time. To counteract this, substances like borax are also added.

**REPORT ON TRAINING PROGRAMMES IN
CLINICAL SKILL LAB/SIMULATOR CENTRE**

REPORT ON TRAINING PROGRAMMES

DENTAL MATERIALS CLINICAL SKILL LAB OR SIMULATOR CENTRE

a) INTRODUCTION:

The science of Dental Material has undergone tremendous changes over the years. Continued research has led to new material systems and changing concepts in the dental field. Interlinked with various specialized branches of chemistry, practically all engineering applied sciences and biological characteristics, the science of dental material emerged as basic sciences in itself with its own values and principles.

b) AIMS:

Aim of the course is to present basic chemical and physical properties of Dental materials as they are related to its manipulation to give a sound educational background so that the practice of the dentistry emerged from art to empirical status of science as more information through further research becomes available. It is also the aim of the course of Dental materials to provide with certain criteria of selection and which will enable to discriminate between facts and propaganda with regards to claims of manufactures.

c) OBJECTIVES:

To understand the evolution and development of science of dental materials. Impart knowledge of physical and chemical properties and advantages and disadvantages of various materials used in dentistry. Acquire knowledge of biomechanical requirements of particular restorative material and its application & limitations. Laying down standards or specifications of various materials to guide to manufacturers as well as to help professionals. Search for newer and better materials which may answer our requirements with greater satisfaction. To understand and evaluate the claims made by manufactures of dental materials. At the end of the course the student should have the knowledge about the composition, properties, manipulative techniques and their various commercial names. The student should also acquire skills to select and use the material appropriately for laboratory and clinical use.

d) NEED FOR THE COURSE:

The profession has to raise from an art to a science, the need for the dentist to possess adequate knowledge of materials to exercises his best through knowledge of properties of different types of materials. There is growing concern of health hazards due to mercury toxicity, inhalation of certain vapors or dust materials, irritations and allergic reaction to skin

due to contact of materials. The Dentist must acquire wider knowledge of physical, chemical and biological properties of the various materials used in the mouth because they may cause irritation of oral tissues. pH of some of the restorative materials causes inflammation and necrosis of pulp which is a concern and the patient should be protected from these. Certain criteria of selection are provided that will enable the dentist to discriminate between facts and propaganda which will make a material biologically acceptable.

e) SCOPE:

Dental materials are employed in mechanical procedures including restorative dentistry such as Prosthodontics, Endodontics, Periodontics and Orthodontics. There is scarcely a dental procedure that does not make use of dental materials in one form or another and therefore the application of dental material is not limited to any one branch of dentistry. Branches such as minor surgery and Periodontics require less use of materials but the physical and chemical characters of materials are important in these fields. The toxic and tissue reaction of dental materials and their durability in the oral cavity where the temperature is between 32 & 37 degree centigrade, and the ingestion of hot or cold food ranges from 0-70 degree centigrade. The acid an alkalinity of fluids shown pH varies from 4 to 8.5. The load on 1 sq. mm of tooth or restorative materials can reach to a level as high as many kilograms. Thus the biological properties of dental materials cannot be separated from their physical and chemical properties.

Exercises to be done by each student:

Sl No	Exercise
1.	Impression material Manipulation, making impressions, identify setting time and defects. (Comparative studies included).
2.	Gypsum Products Manipulation pouring impressions-identify setting time and working time and relation of working time with reference to proportion of water, change in temperature and spatulation time

REPORT ON TRAINING PROGRAMMES

PROSTHODONTICS AND CROWN & BRIDGE CLINICAL SKILL LAB OR SIMULATOR CENTRE

INTRODUCTION

Primary Aim:

The aim of Prosthodontic curriculum is to enable students to manage prosthodontic patients with minimal supervision. As such, students are expected to develop the necessary core skills for gathering diagnostic information, developing a sequential treatment plan, and performing basic prosthodontic procedures by using sound clinical judgments. The Prosthodontics curriculum is organized to provide an overview of Removable Prosthodontics (complete and partially edentulous patients), Fixed Prosthodontics. It also includes an integrated introductory course in Implant Dentistry. This course is a continuum of the ongoing Prosthodontic series of courses, extending from the Pre-clinical through the clinical experience. Each lecture will be structured to provide a review of the basic fundamentals of the lecture topic, a discussion of

the application of these fundamentals to patient treatment, and an update on the latest technological advances/treatment modalities.

Main objectives:

- Upon completion of Prosthodontic courses, students are expected to develop following competencies:
- To conduct a structured interview with the patient (and/or patient companies) to define patients' chief
- complaints and needs.
- To take a complete medical and dental history.
- To perform extraoral and intraoral examination
- To fill the patient's record in details.
- To formulate a sequential treatment plan.
